Note: Shooting locations having the same block location as a council district boundary were divided equally between the districts that share the block location. For example, if there were 10 shootings on South Street, 5 shootings would be assigned to each districts 8 and 9. Shooting locations are possibly better represented by an area, as there is not only a point of origin, but a trajectory and an impact location. In addition, depending on the type of shooting, the associated police activity would likely affect residents of both districts.
